B-SEC-200

## Call For Papers

---

Show me what you got!

2.0

It has been a while now that you are in the coding business, and you must be tired of the C/C++ inhuman syntax and cannot stand reading one more Unix manpage.

After all that time, your programs still crash during code reviews, and you wake up sweating in the middle of the night after awful nightmares about your last failed unit tests.

Looks like it's time to stop programming to hack other people's work and attend awesome security talks for a change!

If you think you have good knowledge or valuable insight to share in/on/about the field of computer and network security, crawl out of your basement and put on your best attire.

Short talk or a workshop, submit your papers and be among this year's security chosen beings!

Papers should include the title of the talk/workshop along with a brief description of it (5-10 lines).

If you do not have any material to present, go fill up those information tanks at the back of your brains with new notions like how the outside world is full of poorly programmed pieces of software or how evil hackers steal your mom's identity, break into your connected toaster and ransom you for lodicoins.

Topics are NOT limited to one theme and may include (among others):

- reverse engineering
- vulnerability analysis
- cryptography
- privacy
- usage of common or new security tools
- anything that made the headlines in IT security news

If your paper ends up being selected, you will animate the short talk or the workshop during the corresponding security project.

These events will be open to all students, streamed live and may take place in any Epitech site.

Talks must preferably be short (15-20m + questions).  
Workshops can be any length, but not more than 4 hours, and should require minimal hardware (preferably virtual environments).

Of course, taking part in these events and presenting quality material will without a doubt be rewarded during the unit evaluation...

## SUBMISSION PLATFORM

---

To submit your talk or workshop idea, you have to go to <https://conference-hall.io/public/event/GIOHv77Y2F1KHedE1tD2>, register and submit your idea on there.

*Conference Hall* is a platform used by other company and professional. If you want to participate in other, public, CFP, be sure to do it in a professional manner.

You can submit up to 3 ideas. Each submissions will be reviewed individually by a team and the selected ones will be contacted to plan to session.
